Attachments: Formaldehyde_TR_Tables_071213.docx

Hi Julie,

Attached is the document containing the evidence tables in the formaldehyde TR. There are a little over 100 additional rows for your QC Review. They are highlighted in green this time. Please let me know if you have trouble obtaining the pdfs and we will help get them to you.

Regards, Barbara Glenn

Hi Barbara,

Heather is on vacation this week, but I will be in the office tomorrow to initiate work on the formaldehyde tables.

Thanks very much,

Julie

Hi Heather,

Thank you very much for the reviews you have conducted so far. We especially appreciate your observations concerning consistency across all the health domains.

We have decided to continue to triage and will be sending you slightly more than 100 study rows for studies that are used to form our hazard conclusions. I am collecting information from the team and likely will send the tables with highlighted studies (in green this time) tomorrow.

Regards, Barbara

John and Barbara-

Attached are the last human studies evidence tables for formaldehyde. With this delivery, the QA of the first 100 study rows is complete. Please let us know if you would like us to continue with QA of the remaining study rows.

In addition to some of the formatting issues identified for animal studies, we noted a few additional formatting inconsistencies in the human studies, most notably:

1. Study design subheaders (reference, population, etc.) are not shown in all tables or are not consistent across tables
2. Tier designations appear in different places across tables, and some lack rationales.

As Julie mentioned earlier, we could provide technical editing of these tables under the Technical Editing task order (TO 1108), if requested by EPA.

Please let us know if you have any questions or comments.

Heather
